

Augustine Tambe

South Jordan, UT · a.tambe30@gmail.com

atambe.xyz · github.com/RepTambe · linkedin.com/in/augustine-tambe

Hands-on platform and reliability engineer (CKA-certified) who builds and operates multi-tenant cloud infrastructure with Infrastructure as Code, GitOps, and strong observability practices. Experience supporting customer production cloud environments end to end, from Terraform-provisioned infrastructure through incident response, root-cause analysis, and blameless postmortems. Background in security engineering brings a security-minded default to platform design, IAM, and access control. Comfortable owning ambiguous problems and building automation-first solutions in fast-moving environments.

TECHNICAL SKILLS

Cloud & Kubernetes: AWS, Kubernetes (CKA; k3s/EKS, hands-on with managed and self-managed clusters), Docker, containerization & orchestration

IaC & GitOps: Terraform (OpenTofu-compatible), ArgoCD (GitOps continuous delivery), GitHub Actions, CI automation

Observability & Reliability: Prometheus, Grafana, Splunk, Elastic, SIEM, incident response, root-cause analysis, blameless postmortems, on-call rotation experience

Languages & Scripting: Python, Bash, Go (familiar) — automation, internal tooling, and system integrations

Systems & Networking: Linux/Unix administration, TCP/IP, DNS, HTTP/S, load balancing, cloud security best practices, IAM

PROFESSIONAL EXPERIENCE

DevOps Engineer I | Versaterm

Remote · Jan 2026 – Present

- Build and maintain CI/CD pipelines and deployment automation for containerized public-safety applications in a regulated SaaS environment.
- Develop Infrastructure as Code (Terraform) modules to standardize cloud provisioning and reduce deployment friction across engineering teams.
- Identify workflow bottlenecks and ship tooling improvements that increase developer velocity and deployment reliability.

Concierge Security Engineer II | Arctic Wolf

Pleasant Grove, UT · Jul 2024 – Jan 2026

- Supported customer production cloud environments (AWS and on-prem), diagnosing and remediating 100+ infrastructure and IAM misconfigurations to improve reliability and security posture.
- Automated triage and operational workflows in Python with SIEM query optimization, reducing mean investigation time.
- Served as a first responder for production incidents — triage, root-cause analysis, and written postmortem reporting to customers and engineering.
- Partnered with engineering to improve logging pipelines, observability, and detection coverage across large-scale systems.

Triage Engineer I | Arctic Wolf

Pleasant Grove, UT · Apr 2024 – Jul 2024

- Analyzed 200+ weekly events, correlating host, network, and cloud telemetry across large-scale, multi-tenant environments.
- Built reusable detection queries and automated investigation playbooks aligned to MITRE ATT&CK, reducing manual operational toil.

Security Specialist | Children's Miracle Network Hospitals

Salt Lake City, UT · Aug 2023 – Apr 2024

- Managed endpoint security and vulnerability scanning across enterprise infrastructure in a healthcare setting, supporting compliance and operational uptime.

PROJECTS

Kubernetes Platform Engineering Homelab

- Automated VM provisioning and image creation with Terraform and cloud-init on Proxmox; deployed k3s with Cilium CNI, Traefik, and MetalLB.

- Implemented ArgoCD GitOps pipelines for declarative, drift-detected application deployment — mirroring production CI/CD practices.
- Designed VLAN-segmented network architecture (subnets, routing, firewall policy) for workload isolation, mirroring production EKS/ECS patterns.

AI Inference Platform

- Built and operated a GPU-accelerated inference platform (Ollama + Open WebUI) serving LLMs to internal users — hands-on experience supporting AI-enabled workloads.
- Debugged container networking and service exposure to keep the AI workload reliably available.

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · AWS Cloud Practitioner · CompTIA Security+ · CompTIA CySA+ · CompTIA Network+ · HTB CDSA · BTL1
